

Using the File “FRONTEND_WEB_INSTRUCTIONS_FINAL_V1.md” and prompt shared created the frontend as below

Dashboard

The landing page. It gives a quick overview of the app, shows the main workflow, and provides shortcuts to the core actions like upload and search.

Upload Resume

The ingestion page. Users can upload a single resume or bulk folder, track processing progress, see failed files with reasons, and retry failed uploads automatically.

Single file upload

Resume ingestion

Upload a PDF, DOC, or DOCX resume, watch the progress state, and complete the ingestion flow before moving on to search.

Upload resume

Drag and drop a PDF, DOC, or DOCX file or use the browse button.

R

Drop your resume here
PDF, DOC, or DOCX. Maximum size: 5 MB.

Browse files

Progress

The app will move through upload, processing, and completion states.

Waiting for file 0%

Features available for upload resume

Single resume upload with validation

Bulk folder upload

Progress indicator for upload and processing

Failed resume list with reason

Automatic retry for failed uploads

File type and size validation

Supported formats: PDF, DOC, DOCX

Processing status and success/failure summary

Include subfolders for nested directories

Search Resume

The retrieval page. Users can search stored resumes, filter/rank results, inspect candidate details, and use the chat assistant to ask natural-language questions about the resume data.

The interface is titled "Resume retrieval" with a subtitle "Search the stored resume database, inspect ranked candidates, and open a preview for each result." Below this is a "Search resumes" section with the instruction "Search stored resumes using a job description, skill list, or role title." A "Search query" input field contains the example text "Example: Senior Java developer with AWS, Spring Boot, and microservices experience". To the right, under "Search mode", there are four buttons: "Smart Search" (selected), "Hybrid", "Vector", and "BM25". Each button has a brief description of its search method. Below the search query field, there are three more controls: "Top results" (set to 5), "Include candidate summaries" (checked), and "Summary style" (set to Short). A large "Search resumes" button is at the bottom right.

Search Results

The results page displays five candidate profiles in a grid. Each profile includes a rank number, name, score, contact information, experience, a folder import button, a summary, skills, and an "Open preview" link.

- #1 ARUL LIVINGSTON** (Score: 0.900): 7.4 years experience, Chennai, India. Summary: Experienced Java developer with 7.4 years of expertise in building enterprise applications, holding strong Java skills with a background in large-scale Android app development. Skills: Java, JavaScript, SQL, Postman, REST API, Git.
- #2 KIRUBA JOY** (Score: 0.800): 0 years experience, Chennai, India. Summary: Experienced Java developer with 4+ years of expertise in designing, developing, and maintaining enterprise-level applications using Java, Spring Boot, and Microservices. Skills: Java, SQL, Postman, REST API, Git.
- #3 Vigneshwaran C** (Score: 0.700): 5.2 years experience. Summary: Experienced Java developer with 5.2 years of experience in web application development using Java, Spring Boot, and Hibernate. Skilled in design, implementation, testing, and code analysis. Skills: Java, TypeScript, Postman, REST API, Jenkins, Git.
- #4 ABINESH SUNDAR** (Score: 0.400): 0 years experience, Chennai, India. Summary: Abinesh Sundar is a Full Stack Developer with experience in building data-driven applications, suitable for a Java developer role. He has a background in machine learning and full-stack development. Skills: Java, JavaScript, Python, SQL, REST API, Git.
- #5 GANESANM** (Score:): 0 years experience.

Search Resume page features:

- Keyword and semantic search
- BM25 / vector / hybrid search modes
- Ranked candidate results
- Candidate detail preview
- Reranking support
- Resume summaries
- Chat assistant for natural-language questions
- Search error handling and fallback visibility

Additional implementation - Floating Chat bot

Who has the strongest QA automation background?

Answer

I found 5 relevant resumes for "Who has the strongest QA automation background?".

Top matches
